

Highly customizable

Wacom products can be easily programmed to adapt to specific work tasks and personal needs. Typical functions like 'left mouse click', 'right mouse click', 'double click' and even shortcuts, pop-up menus or modifier keys can be easily set on the different buttons and thus offer many possibilities of variation.

'Penabled technology'

Only Wacom pens are cordless and battery-free which means optimum weight and balance for minimal strain.

WACOM

One ergonomic way to use your computer

Ergonomic advantages of Wacom pen tablets

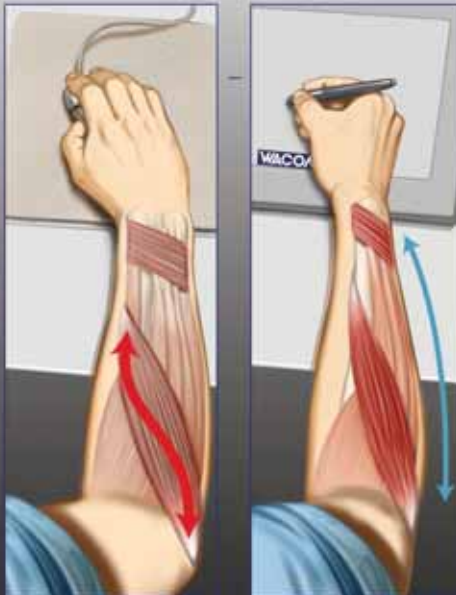

Wacom pen tablets are recommended ergonomic alternatives to traditional input devices that can help to reduce or even prevent Mouse Arm Syndromes (e.g. 'RSI'-Repetitive Strain Injury or 'CTS'-Carpal Tunnel Syndrome). The digital Wacom pen:

- assumes all the functions of a traditional computer mouse like navigating, dragging & dropping, clicking etc.
- can be used for general desktop navigation as well as for other applications like office, paint, draw and sign.
- provides especially in terms of ergonomics vital advantages.

Full control with minimum effort

The 'absolute positioning', which means the active area of a pen tablet automatically maps to the size of your screen, allows you to control the entire screen with a few quick movements only. Unnecessary strains of muscles in fingers, hand and arm are being reduced.

Natural position of hand and arm

Wacom pens allow you to hold your hand in a relaxed handshake position that eliminates forearm twisting. There is no need to twist the forearm away from its natural position and senselessly strain muscles and tendons.

No repetitive use and stress of the same few muscles

Using a pen means several muscles in your fingers, hand, and arms are being used evenly. With most mice, the same muscles in the fingers, hand and arms are unilaterally used and rest in the same position for a longer time.
