

Sunshade for Nikon CoolPix 990

If you've tried using your CoolPix digital camera with the sun shining on the camera's LCD, you know how valuable a little shade can be. This template makes it easy to create your own sunshade. You can store the shade flat when you don't need it and quickly install it by mating the hook and loop strips. Just print out this page, the pattern is actual size.

You'll need some black, adhesive backed strips of Velcro® hook & loop material. Find an inexpensive black vinyl report cover or a thin vinyl binder at an office supply store. A craft knife and a straightedge make it easy to get clean, straight cuts.
